A nice relaxing casual simulation game. Gameplay is a mix of time management (you start from scratch with each level and have to finish them in a set time limit) with a more free-form city-building sim (you can place buildings pretty much anywhere and your workers take care of gathering resources without direct control) and exploration\adventure elements (you control the main character and have to go running all over the map completing quests). I haven't seen this particular style of gameplay outside the Adelantado Trilogy, and I really enjoy it.

There are a few annoying mechanics: since the levels are long, replaying if you miss the expert time is tedious, and buildings losing efficiency over time is an unnecessary bit of micromanagement. Often you're in another area when their efficiency falls too low, so you can't fix them, and the resource costs for efficiency restoration are so high that it doesn't seem worth it compared to just tearing down the building and putting up a new one. However, that wasn't enough to make the game unfun, and it's certainly an improvement over Adelantado 1, where you can't destroy buildings at all.
